We convert your metered gas units to kWh using the following formula:

Metered volume × metric conversion factor[1] × daily calorific value[2] × 1.02264 (volume correction) ÷ 3.6 = kilowatt hours (kWh) used.

[1] We convert the gas use into kWh according to your meter type – 2.83 (imperial) or 1 (metric).

[2] The calorific value of gas changes every day and can range from 37.5 to 43.0. To find out calorific values used to calculate your charges you can visit: data.nationalgas.com/find-gas-data
